Rutgers MBS Students Meet with EcoComplex Business Incubator Companies and Staff

The Master of Business and Science (MBS) program met at the EcoComplex on Tuesday, February 12, 2013 to listen to and interact with EcoComplex Incubator Companies and EcoComplex Staff. The MBS program is part of a national movement of Professional Science Master’s programs that brings together master’s level study in science, engineering, and math with “plus” courses in business and policy.

The Professional Science Master’s Program at Rutgers, The State University of New Jersey is a combination of an MS and MBA degree. Students choose a particular science concentration that is paired with a business curriculum. The business curriculum consists of core courses in finance and accounting, marketing, communication and leadership, management of science and technology electives, ethics and a capstone course covering entrepreneurship and intrapreneurship.

The MBS students listened to presentations from the University’s Economic Development Unit, EcoComplex Administration, the NJ Economic Development Authority and companies that have graduated from, or are still in residence, at from the EcoComplex incubator. Then they had a chance to meet one-on-one with the companies and practice their networking skills. This was followed by a tour of the EcoComplex Labs, Scale-up Rooms and Greenhouse. Many of the students were interested in Sustainability which is a core theme at the EcoComplex. The attached presentations were part of the day’s activities.
